## 1 Introduction

PACViR is a user-friendly software tool to visualize the coverage depth of a complete plastid genome as well as the equality of its IR regions while simultaneously accounting for the circular, quadripartite structure of the genome. This vignette provides two examples of executing PACViR on empirical data via the R function `PACViR.complete()` from within the R interpreter and from the BASH commandline shell.

## 2 Requirements

To run PACViR, several dependencies have to be installed.

```
# Mosdepth (a general dependency)
system("conda install -y mosdepth")
# CRAN packages
if (!require("pacman"))
  install.packages("pacman")
pacman::p_load("RCircos", "optparse", install=TRUE)
# Bioconductor packages
if (!requireNamespace("BiocManager", quietly=TRUE))
  install.packages("BiocManager")
if (!requireNamespace("genbankr", quietly=TRUE))
  BiocManager::install("genbankr")
```

### 3 Executing PACViR via R interpreter

PACViR can be executed via the R function `PACViR.complete()` from within the R interpreter.

```
library(PACViR)
# MH161174
## Specify input files
gbkFile <- system.file("extdata", "MH161174/MH161174.gb", package="PACViR")
bamFile <- system.file("extdata", "MH161174/MH161174_PlastomeReadsOnly.sorted.bam",
                        package="PACViR")

## Specify output file
outFile <- paste(getwd(), "/MH161174_AssemblyCoverage_viz.svg", sep="")
## Run PACViR
PACViR.complete(gbk.file=gbkFile, bam.file=bamFile, windowSize=250,
                 mosdepthCmd='mosdepth', threshold=15, delete=FALSE,
                 output=outFile)
```

**Nuphar japonica isolate NY692 chloroplast, complete genome.**

Figure 1: File `MH161174_AssemblyCoverage_viz.svg` as generated via `PACViR.complete()`

## 4 Executing PACViR via BASH shell

PACViR can be executed via the BASH shell command `PACViR_Rscript.R` from the BASH commandline shell.

```
# MH899017
Rscript ./inst/extdata/PACViR_Rscript.R \
-k ./inst/extdata/MH899017.gb \
-b ./inst/extdata/MH899017_PlastomeReadsOnly.sorted.bam \
-o ./MH899017_AssemblyCoverage_viz.svg
```

***Dasyphyllum excelsum* isolate DAS01 chloroplast, complete genome.**

Figure 2: File `MH899017_AssemblyCoverage_viz.svg` as generated via `PACViR_Rscript.R`

## 5 sessionInfo

```
> sessionInfo()
R version 3.3.3 (2017-03-06)
